Evaluation Kit

Digital Signage

Digital Signage Evaluation Kit (DSEK-11)

Thank you for your interest in obtaining the Digital Signage Evaluation Kit. The box contains the building blocks and documentation material needed to begin developing a fully functional digital signage solution

Digital Signage Evaluation Kit Overview

The Digital Signage Evaluation Kit (DSEK-11) offers device manufacturers, systems integrators and software developers an open media player platform that is optimized for digital signage applications. This reference platform is comprised of commercially available components, including the 2nd Generation Intel® Core™ i5 processor running the Microsoft Windows Embedded Standard 7 operating system (OS).

With this platform, developers can create an immersive, interactive digital signage experience for customers wherever digital signs are installed, such as in retail stores, hotels, banks and hospitals. Digital Signage solution providers can shorten their time to market by building on this reliable and standards-based development platform.

Evaluation Platform

The DSEK-11 enables solution providers to concentrate on designing digital signage applications rather than investing in platform development. This validated, high-confidence design is the basis for digital signage products capable of servicing a large portion of the digital signage market.

The DSEK-11 uses the 2nd Generation Intel® Core™ i5 processor features new levels of performance for compute-intensive applications like anonymous video analytics and multiple zone displays. It implements Intel® Active Management Technology (Intel® AMT) to further lower the total cost of ownership (TCO) for businesses.

Microsoft Windows Embedded Standard 7 is a componentized version of Windows 7, which allows developers to build run-time OS images that are optimized for digital signage applications. Developers can take advantage of the Image Configuration Editor, Image Builder Wizard and other embedded-enabling tools to accelerate prototyping and image development. The robust networking capabilities and interoperability of Windows Embedded Standard 7 make it easy to connect to other devices, servers and services.

By supporting the right features in a configurable platform, the DSEK-11 can reduce development cost, decrease risk and accelerate time to market for equipment manufacturers.

Highlights:

- 2nd generation Intel® Core™ i5 Processor (2515E) with Intel® Active Management Technology
 - 3MB Cache, 2.5-3.1 GHz, 35W
 - 2 Cores, 4 Threads for improved performance over previous generation
 - Intel® HD Graphics 3000 for improved performance over previous generation
 - Hardware Accelerated HD Video Decoder
 - Mobile Intel® QM67 Express Chipset
- Microsoft Windows Embedded Standard 7 SP1 OS (180-day evaluation)
 - Fully compatible with all Windows 7 applications and hardware/peripherals
 - Powerful Windows Embedded development tools including Image Builder Wizard (IBW), Image Configuration Editor (ICE) and embedded-enabling features (EEFs)
 - Networking and deployment support including the latest Active Directory enterprise configurations, group/local policies, full IPv6 certification and Remote-FX/App-V
 - Improved security support including DirectAccess, BitLocker and AppLocker
 - Multimedia support including DirectX 11, Windows Media Player 12, support for 3rd party Media Player applications and full support for OpenGL, OpenVG etc.
 - Sensor and Location architecture including support for light, accelerometer, shock, proximity, GPS, A-GPS and Cellular/WIFI triangulation
 - A wide variety of manufacturing and servicing capabilities for OEMs and Enterprises
- Dual Channel SODIMM DDR3 1333MT/s memory (total of 4GB)
- SATA 2.5" 32GB SSD Hard Disk
- IEEE802.11 a/b/g/n Intel Wireless PCIe Half Mini Card (6205)
- Small form factor (185mm x 125mm x 50mm) with an aluminum chassis and an EPIC based mainboard
- IO includes
 - Display outputs: HDMI, Display Port, DVI-D, VGA
 - Audio: Line out, Line In, Mic In
 - USB 2.0: 2 Front, 2 Rear

- Gigabit Ethernet interface (Intel® 82579LM GbE PHY)
- Intel® Active Management Technology 7.0 compliant
- Microsoft Windows Embedded Standard 7 180-day evaluation toolkit used for building embedded operating systems. The latest fully functional evaluation software is available from the Windows Embedded Download Center at www.windowsembedded.com/downloads.
- User's guide

Platform Benefits

This fully tested and validated platform provides the digital signage industry with a feature-rich, reliable and standards-based development platform. It supports many connectivity options via PCI Express* and USB, and interfaces to a large variety of peripherals such as WiFi/WiMAX and Bluetooth wireless adapters, and TV tuner modules.

2nd Generation Intel® Core™ processor technology makes it possible to integrate two complete execution cores, the memory controller and the graphics engine, in one physical package and one die. The processor graphics capability saves cost over integrating a separate graphics card and delivers exceptional graphics, high-definition video playback and 3D rendering.

Windows Embedded products are covered by an industry-leading 10-year support program plus a product availability of 15 years. An active community of industry-leading partners is available to support OEMs and ISVs through development.

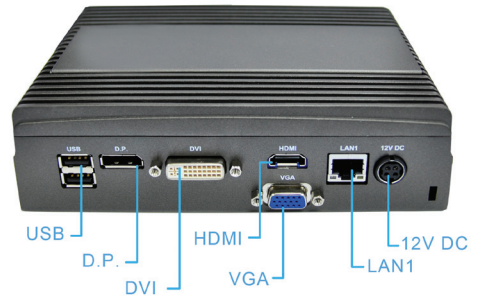

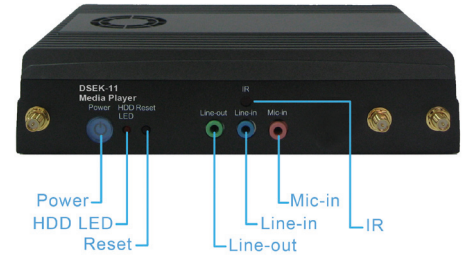

Table 1. Digital Signage Evaluation Kit Features and Benefits

Features	Benefits
Scalability	Solution providers can develop a wide range of signage designs, from entry-level to high-end, using Intel and Microsoft technology.
Interoperability	Businesses can be confident media players based on Intel® architecture and the Windows platform will connect and integrate seamlessly with existing enterprise infrastructure.
Manageability	Intel® AMT 7.0 enables technicians to remotely manage, diagnose and repair systems even when they are powered down.
Energy Efficiency	Windows Embedded Standard 7 delivers smart power management APIs that aid developers building energy saving applications.
Graphics processing	Improved graphics performance using Windows 7 and Intel® processors with processor graphics support multiple displays, rich media blending, multiple zones and large LCD displays.
Rich Media	Customers can deploy interactive solutions with panning and zoom, touch and gesture input to dramatically improve digital signage interaction.

Manufacturing Options

Solution providers can choose to either manufacture a product based on the design available from Intel or purchase systems directly from suppliers. Intel and Microsoft are not manufacturing or selling systems based on the DSEK-11.

1 Intel® Active Management Technology (Intel® AMT) requires the computer system to have an Intel AMT-enabled chipset, network hardware and software, as well as connection with a power source and a corporate network connection. Setup requires configuration by the purchaser and may require scripting with the management console or further integration into existing security frameworks to enable certain functionality. It may also require modifications of implementation of new business processes. With regard to notebooks, Intel AMT may not be available or certain capabilities may be limited over a host OS-based VPN or when connecting wirelessly, on battery power, sleeping, hibernating or powered off. For more information, see www.intel.com/technology/platform-technology/intel-amt/.
